E.5 Non-compliance with the Minimum Capital Requirement and non-compliance with the Solvency Capital Requirement.....	35
E.6 Any other information.....	35

Summary

Introduction

The structure of the Financial Condition Report (SFCR) has been prepared as described in Annex XX (twenty) of the European Union Commission delegated regulation 2015/35.

From the perspective of understanding the business and its inherent risks the most relevant currency from which to evaluate the Company is USD as most revenues and claims related costs of the company are denominated in USD. Therefore, amounts in the tables are presented in both the statutory reporting currency SEK and in USD.

Amounts are presented in millions. Amounts within brackets represent the previous financial year. In many aspects, the SFCR overlaps with the statutory annual report; however, it provides additional insights into our solvency position, based on the perspectives of the solvency regulations. In other aspects, the annual report could provide an even more comprehensive view on the company's operations.

Business and performance

The Swedish Club (the Club) is in a sound financial position. This is reflected in this SFCR as well as the Club's annual report.

Development of key figures for regulatory solvency calculations:

SEK million	2020	2019	2018	2017	2016
Eligible own funds (EOF)	2,434.4	2,776.8	2,490.8	2,372.5	1,961.5
Basic own funds, Tier 1 (BOF)	1,906.2	2,276.3	2,056.5	1,927.0	1,961.5
Ancillary own funds, Tier 2 (AOF)	528.2	500.5	434.4	445.5	-
Minimum capital requirement (MCR)	342.3	332.1	268.5	276.8	322.4
Solvency capital requirement (SCR)	1,056.5	1,001.0	868.7	891.1	1,078.1

USD million	2020	2019	2018	2017	2016
Eligible own funds (EOF)	297.3	298.0	277.7	288.2	215.6
Basic own funds, Tier 1 (BOF)	232.8	244.3	229.2	234.1	215.6
Ancillary own funds, Tier 2 (AOF)	64.5	53.7	48.4	54.1	-
Minimum capital requirement (MCR)	41.8	35.6	29.9	33.6	35.4
Solvency capital requirement (SCR)	129.0	107.4	96.8	108.2	118.5
Exchange rate USD/SEK	8.1886	9.3171	8.9710	8.2322	9.0971

There was good growth for the Club's insurance activities during the year and very good results from investments. The Club's financial position is strong and the solvency requirements continue to be met with a healthy margin. The Club negotiated additional cost-efficient and risk-limiting reinsurance protection for 2021.

During 2020, there were an unusually high number of marine insurance claims, which were also costly, throughout the world. The cruise industry was significantly impacted by the pandemic and for all shipping segments the restrictions have resulted in an array of

challenges as regards staffing and crew. The Club has however limited exposure to the cruise industry.

The combined ratios of 2020, 2019 and 2018 measured in USD, were 123 %, 106 %, and 99 % respectively – the three-year average was 109 %. The claims cost increase reflects a historically high claims outcome for the Club and the industry. The outcome is higher than the long-term trend but at the same time it is within the framework of what can be expected in individual years. Very good returns on financial investments compensated for the underwriting loss and gave a total result before appropriations and tax of USD 3 million (25).

The solvency ratio, Eligible Own Funds (EOF) divided by the Solvency Capital Requirement (SCR) was 230 (277) % at the end of December 2020. The change compared to previous year comes from a higher SCR, due mainly to higher underwriting volume and increased value of the investment assets.

At the beginning of 2021 both Standard & Poor's and AM Best confirmed their respective "A-" ratings of The Swedish Club.

System of governance

In 2020, no material changes were introduced, however, the system of governance is continuously fine-tuned to meet the challenges of operations.

A description of the system of governance is found in section B.

Risk profile

There has been no material changes to insurance or reinsurance undertakings. The operations and performance thereof have followed of the Club's established business models.

The risk exposure profile of the Club has not changed materially in the last year, other than risk exposure which comes from the achievement of targeted growth. The material risks that the Club are exposed to are explained in section C.

Valuation for solvency purpose

Technical provisions are calculated using the probability weighted average of future cash flows discounted with the risk free yield, and a risk margin as defined by the solvency requirements. The Club's investments are valued for Solvency II purposes on the same basis as in the statutory accounts.

The valuation for solvency purpose is explained in section D.

Capital management

The capital management set-up has, with the exception of relatively small allocations to high-yield assets, remained mainly unchanged in the course of 2020 in terms of exposures to various asset classes and related counterparties.

Section E contain information on own funds and the regulatory capital requirement they must cover.

Sammanfattning (Summary in Swedish)

Introduktion

Solvens- och verksamhetsrapporten (SFCR) har upprättats enligt den struktur som beskrivs i bilaga XX (tjugo) av EU Kommissionens delegerade förordning 2015/35.

Från perspektivet att förstå verksamheten och dess inneboende risker är den mest relevanta valutan för att utvärdera företaget USD eftersom de flesta intäkter och skadekostnader för företaget är i USD. Belopp i tabellerna presenteras därför både i den lagstadgade rapporteringsvalutan SEK och i USD.

Belopp presenteras i miljoner. Belopp inom parentes representerar föregående års räkenskapsår i många aspekter överlappar SFCR och årsrapporten varandra. SFCR ger dock ytterligare insikter om vår solvensposition, baserat på perspektiven i solvensregelverket. I andra aspekter kan årsredovisningen ge en ännu mer utförlig bild av företagets verksamhet.

Verksamhet och resultat

The Swedish Club (the Club) har en sund finansiell ställning. Det återspeglas i denna SFCR samt i företagets årsredovisning.

Utveckling av nyckeltal för regulatoriska solvensberäkningar:

SEK million	2020	2019	2018	2017	2016
Medräkningsbara kapitalbasmedel (EOF)	2,434.4	2,776.8	2,490.8	2,372.5	1,961.5
Primärkapital, nivå 1 (BOF)	1,906.2	2,276.3	2,056.5	1,927.0	1,961.5
Tilläggskapital, nivå 2 (AOF)	528.2	500.5	434.4	445.5	-
Minimikapitalkrav (MCR)	342.3	332.1	268.5	276.8	322.4
Solvenskapitalkrav (SCR)	1,056.5	1,001.0	868.7	891.1	1,078.1

USD million	2020	2019	2018	2017	2016
Medräkningsbara kapitalbasmedel (EOF)	297.3	298.0	277.7	288.2	215.6
Primärkapital, nivå 1 (BOF)	232.8	244.3	229.2	234.1	215.6
Tilläggskapital, nivå 2 (AOF)	64.5	53.7	48.4	54.1	-
Minimikapitalkrav (MCR)	41.8	35.6	29.9	33.6	35.4
Solvenskapitalkrav (SCR)	129.0	107.4	96.8	108.2	118.5
Valutakurs USD/SEK	8.1886	9.3171	8.9710	8.2322	9.0971

Bolaget har under året uppvisat mycket god tillväxt i försäkringsverksamheten och ett mycket gott resultat från investeringar. Bolagets finansiella ställning är stark och solvenskravet enligt regelverket Solvency II möts fortsatt med god marginal. Bolaget har framförhandlat ytterligare kostnadseffektivt och riskbegränsande återförsäkringsskydd för 2021.

Globalt inträffade under 2020 osedvanligt många och samtidigt kostsamma skador inom sjöförsäkring. Coronavirusets spridning hade stor påverkan på kryssningsindustrins affärsförutsättningar och villkoren för besättningarna inom alla shippingsegment. Bolaget har marginell exponering mot kryssningsindustrin.

Totalkostnadsprocenten för 2020, 2019 och 2018 mätt i USD, uppgick till 123 %, 106 % respektive 99 % och genomsnittet för de senaste 3 åren var 109 %. Ökningen i skadekostnaderna återspeglar ett historiskt högt skaderesultat för bolaget och för industrin. Utfallet är högre än den långsiktiga trenden men samtidigt är det inom ramen för vad som kan förväntas under enskilda år. Mycket god avkastning på investeringstillgångarna kompenserade för förlusten i försäkringsrörelsen och gav ett resultat före bokslutsdispositioner och skatt på USD 3 miljoner (25).

Solvenskvoten mellan medräkningsbara kapitalbasmedel (EOF) och solvenskapitalkravet (SCR) uppgick till 230 (277) % vid utgången av december 2020. Förändringen jämfört med föregående år består i en högre SCR som i huvudsak beror på högre försäkringsvolym och en ökning i värdet av investeringstillgångarna.

I början av 2021 bekräftade både Standard & Poor's och AM Best sin respektive "A-" rating för The Swedish Club.

Företagsstyrningssystem

Under 2020 introducerades inga materiella förändringar, dock finjusteras företagsstyrningssystemet kontinuerligt för att möta verksamhetens utmaningar.

En beskrivning av företagsstyrningssystemet återfinns i sektion B.

Riskprofil

Det har inte varit några materiella förändringar i försäkringsåtaganden eller i återförsäkringsprogrammet. Verksamheten och dess resultat har inte varit utanför etablerade affärsmodeller.

Företagets riskexponering har inte ändrats materiellt under det senaste året, förutom den ökade riskexponering som åstadkommit genom kontrollerad tillväxt.

De materiella riskerna som företaget är exponerat för förklaras i sektion C.

Värdering för solvensändamål

Försäkringstekniska avsättningar beräknas genom att använda det sannolikhetsvägda genomsnittet av framtida kassaflöden diskonterade med den riskfria räntan med tillägg för en riskmarginal enligt definitionen i solvenskraven. Företagets investeringstillgångar värderas för Solvens II ändamål på samma sätt som i den finansiella årsredovisningen.

Värdering för solvensändamål förklaras i sektion D.

Finansiering

Beträffande exponering till olika tillgångsklasser, med undantag för mindre allokeringar till "high-yield assets", och relaterade motparter har kapitalhanteringen varit i princip oförändrad under 2020.

Sektion E innehåller information om kapitalbasen och de regulatoriska kapitalkrav den måste täcka.

A. Business and performance

A.1 Business

The Swedish Club is an independent, self-managed, mutual insurance association, headquartered in Gothenburg, Sweden, with registered branch offices in Hong Kong, Oslo and London and representative offices in Piraeus and Tokyo. The Club is owned and controlled by its members, the policy holders. Mutuality means that the Club's interests are identical to the collective interests of the members.

The registered legal business name is Sveriges Ångfartygs Assurans Förening and its English registered name is The Swedish Club.

The Company is registered and domiciled in Sweden and licensed by the Swedish financial supervisory authority (Finansinspektionen) to carry out Direct and Indirect Non-life insurance under the following classes:

- 6. Ships
- 12. Liability for ships
- 17. Legal expenses

Finansinspektionen's contact details can be obtained from its website: www.fi.se and it can be contacted directly at Brunnsgatan 3 in central Stockholm or by phone on +46 8 408 980 00.

The Company's external auditors are PwC, SE-113 97 Stockholm, Sweden.
Visiting address: Torsgatan 21, Tel: +46 10 213 30 00, Website: www.pwc.se

Contact details to Norwegian branch supervisory authority can be obtained from its website: www.finanstillsynet.no. The Norwegian branch external appointed auditor is PwC Oslo, Dronning Eufernias gate 8, 0191 Oslo, Norway.

The Company's insurance classes are all classified under the line of business MAT, Marine, Aviation and Transport.

No insurance contracts have been issued through the branches in London (under the temporary regime) and Hong Kong.

An application for an insurance licence for the Hong Kong branch is under review by the Insurance Authority in Hong Kong.

Parts of the pool P&I reinsurance protection are covered by the captive company, Hydra Insurance Company Limited (Bermuda), which is partly owned by the Club. Hydra is a segregated accounts company incorporated under the laws of Bermuda in which each member of the International group of P&I clubs (IG) is an account owner. Hydra's assets are segregated in separate cells in such a way that they can only be used to satisfy the liabilities of the 'owning' Club.

The Club have two subsidiaries; The Swedish Club Hong Kong limited, which principal tasks are to provide for marketing, client liaison and advisory services in Asia; and The Swedish Club Academy AB which is an associated company which is 50 % owned by the Club. The Swedish Club Academy AB provides a training programme, maritime resource

management (MRM), for ship's officers, engineers, pilots and shore-based personnel. The aim is to increase knowledge about human behaviour, capabilities and limitations and to safeguard positive attitudes to safety and teamwork. MRM is generally accepted to be the most efficient framework of improving crew cooperation and minimising the risk of accidents.

The Club writes insurance with members domiciled in several countries. The most important markets by premiums and policyholders' country of domicile are shown in the table below.

Market, amounts in million	%	SEK	USD
China	21	358	38
Greece	18	298	32
Germany	15	249	27
Singapore	8	137	15
Norway	7	111	12
Sweden	6	96	10
Hong Kong	4	72	8
Other countries	21	345	37
Gross premiums written		1,665	179

Parts of the pool P&I reinsurance protection are covered by the captive company, Hydra Insurance Company Limited (Bermuda), which is partly owned by the Club.

The regulatory reported figures for claims incurred, includes the changes in the value of Hydra. This is booked as change in other technical provisions in the statutory accounts.

Credit rating

The annual credit valuation of The Swedish Club, carried out by Standard & Poor's, resulted once again in a rating of A-, with stable outlook which was made public in January 2021. Also, the credit rating agency A.M. Best also confirmed its rating of A- in that same month.

Prospects for 2021

The performance of most countries' economies was very weak or negative in 2020 due to the outbreak of COVID-19. The prerequisites for some level of global economic recovery in 2021 are assessed as relatively good as more and more are vaccinated.

For 2021, the Club will be prioritising price recovery over volume growth. We anticipate that total claims cost for 2021 will be significantly lower compared 2020, which stood out as a highly unusual year with a negative claims outcome that is less likely to be repeated. We expect the rate of favourable development in stock markets experienced during 2020 and the start of 2021, to taper off throughout the remainder of the year. Our assessment is that the Club's competitive strength and strong financial position will provide resilience to get through this crisis, which should offer comfort to all our business partners and members. With the intention of further strengthening the Club's competitiveness and market offering, an initiative aimed at establishing branches in Hong Kong and Singapore has started.

Considering the level of reported claims, insurance activities have developed in accordance with plan during the start of the year. However, as in 2020, direct marketing and sales

activities will be conducted in digital forums rather than meetings that require travel, which is in line with the recommendations of the Swedish Public Health Agency and other relevant authorities.

A.2 Underwriting performance

Amounts in million, net of reinsurance	2020 SEK	2019 SEK	2020 USD	2019 USD
Premiums earned (A)	1,256	1,094	135	118
Claims incurred (B)	-1,251	-953	-139	-101
Net operating expenses (C)	-258	-228	-27	-24
Combined ratio (B+C)/A	120 %	108 %	123 %	106 %
Underwriting result	-224	-44	-28	-3

Total premiums net of reinsurance amounted to USD 134.7 million (118.2). Compared to previous year Marine increased with 40 %, while Energy, P&I and FD&D were on similar levels.

During 2020, the industry experienced an unusually high number of marine insurance claims, which were also of high severity, throughout the world. During the year, the Club experienced 26 claims reported in excess of USD 500,000. In 2019, there were 24 such claims. For 7 (3) of the claims, the cost before reinsurers' share amounted to more than USD 2 million.

The total costs for net claims incurred was USD 139 million, which corresponds to 103 (86) % of earned premiums, net of reinsurance.

Net operating expenses were in line with budget.

The underwriting result USD -28 (-3) million includes transferred investment income which is not part of the combined ratio.

The part of the investment income that is reallocated to insurance activities is based on a calculated interest rate on the float generated during the period between premium payment and claim payment. The interest rate that was used corresponds to the expected United States 1-year bond yield. For 2020, the rate used was 1.6 (2.6) %. The transferred investment income amounted to USD 3 (5) million.

Parts of the pool P&I reinsurance protection are covered by the captive company, Hydra Insurance Company Limited (Bermuda), which is partly owned by the Club.

The reported figure for claims incurred, includes the changes in the value of Hydra. This is booked as change in other technical provisions in the statutory accounts. Changes in other technical provisions amounted to USD -2 (-1) million.

A.3 Investment performance

Amounts in million	2020 SEK	2019 SEK	2020 USD	2019 USD
Quoted shares	87	163	12	18
Interest-bearing securities	125	143	16	15
Other financial income and expenses	-1	-2	0	0
Forward exchange agreement	27	3	3	0
Gains/Losses on foreign exchange, net	-220	79	3	-1
Financial result	19	386	34	32
Total return	6.8 %	9.2 %	7.7 %	8.8 %

The Club's primary objective is to identify an acceptable risk level from which it can maximize long-term investment returns, while at the same time matching technical provisions in terms of currency and duration.

At the end of 2020, the value of the Club's investments amounted to USD 397 (355) million, of which 79 (79) % consists of interest-bearing securities, 20 (21) % is equity funds and 1 (0) % is forward exchange agreements. The Club sign hedge contracts to reduce risk for currency exchange rates fluctuations in the USD accounting.

The financial result, including exchange rate differences amounted to USD 34 (32) million. The result from interest-bearing securities was USD 16 (15) million. The result for quoted shares amounted to USD 12 (18) million and the result for other financial income and expenses amounted to USD -0.1 (-0.2) million. The result for forward exchange contracts was USD 3.3 (0.3) million. The valuation of investment assets into USD resulted in exchange profits USD 2.4 (-1.0) million. Other exchange differences amounted to USD 0.5 (-0.1) million.

The total return on investments was 7.7 (8.8) %.

Gains and losses recognised directly in equity

No gains and losses are recognised directly in equity.

Investments in securitisation

The Club does not have any direct investments in securitisation assets.

A.4 Performance of other activities

No other material income or expenses have been incurred over the reporting period.

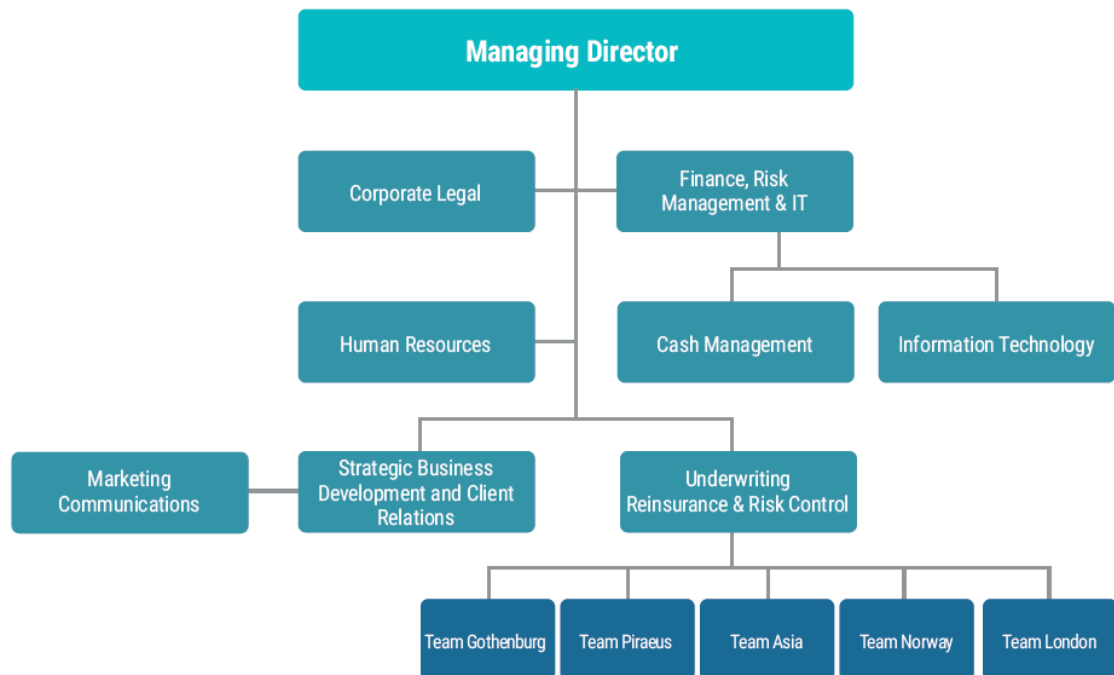

A.5 Any other information

There are no other material matters in respect to the business or performance of the Club.

B. System of governance

B.1 General information on the system of governance

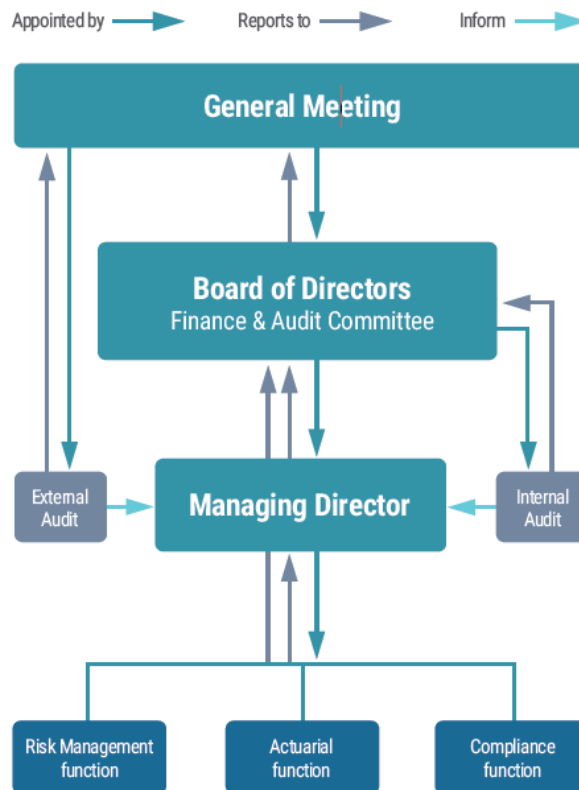

The Club's organisation is illustrated as follows:

The duties and responsibilities within the organisational structure is defined in the Club's management system¹.

¹ The management system covers directives set out by the Board; policies and working instructions set out by the Club's management; and responsibilities and authorities for each individual. It also describes key processes.

The figure below illustrates important information flows and responsibilities.

Effective internal control is a condition for sound and prudent management of the Club. The internal control within the organisation is exercised through three levels. The first level is carried out by the operational functions. The second level is independent from the operational function and consists of the risk management function, the actuarial function and the compliance function. The third level, which is independent from all other functions, is the function for internal audit. The internal auditor is appointed by the Board.

Managers of an operational function or a geographical team are responsible for internal control and compliance within their area of responsibility. They shall ensure that all the employees in the department are familiar with guidelines and instructions in the management system and all applicable rules and regulations. Managers shall control and follow up compliance within their area of responsibility and take corrective action in case of non-compliance. Managers are also responsible to inform the risk management function, the actuarial function, the compliance function and the internal audit function of any circumstance that may be relevant for the performance of their respective duties.

The Annual General Meeting (AGM) is the highest authority where all the Club's members. It elects the members can exercise their voting rights. The AGM elects the members of the Board and members of the Club's Election Committee, approves the annual accounts, appoints external auditors and deals with any other business duly referred to it.

The Board of Directors has the ultimate responsibility for the Club's business operating in accordance with applicable laws and regulations. The Board decides on the Club's strategic

direction and establishes directives and instructions, as well as ensuring that appropriate internal instructions for risk management and risk control exist.

The Board continuously monitors the Club's operations, financial performance and asset management. The Board shall have regular interaction with any committee it establishes as well as with the management team and other key functions. The Board shall request information proactively and challenging it when necessary. The duties and responsibilities of the Board are set out in its working procedures. The Board consists of 24 members including two staff representatives.

The Club's Election Committee proposes new board members, and members to the election committee, to the AGM for election of Board members. The committee also proposes remuneration to board members. The Election Committee shall comprise of four members including the managing director ex officio.

The Finance & Audit Committee is a committee of the Board. The Committee's task is to serve as a link between the Board, management and the auditors regarding financial matters and preparing matters to enable the Board to make well-informed decisions. It further reviews recommendations and provide feedback to management on key areas, such as changes in investment allocation, auditing, compliance and premium collection. The Committee supervises the performance of the investment operations and decide on investment allocations within limits stated in the Club's investment directive. The Finance & Audit Committee consists of seven members appointed by the Board, including the managing director and director of finance ex officio.

No material changes in the system of governance have taken place over the reporting period.

B.1.1 Remuneration policy

Each year, the Board reviews and adopts a directive establishing the Club's remuneration policy. Before the adoption of the remuneration directive a risk analysis of the implications of the remuneration system proposed was considered by the Board. The result of the risk analysis performed was that the Club's remuneration policy does not involve any tangible risks and that conflicts of interest when determining the remuneration are avoided through the use of different levels of authority where decisions on remuneration are made. The assessment is based primarily on the conclusion that the policy supports The Club's long-term interests, that it promotes effective risk management and discourages excessive risk taking.

Remuneration model and criteria for variable remuneration

Fixed monthly salary is the primary source of remuneration. Variable remuneration is used as a supplement to the fixed salary and it is either collective or individual. The variable remuneration is meant to stimulate or reward performance that is exceptional and promotes the Club's long-term interests. The Board may suspend payment of variable remuneration if it feels that there are exceptional circumstances and that such payment would be inappropriate, or that it would be contrary to the Club's interests. Senior management may suspend or reduce the bonus payment to an employee if the employee

fails to comply with the rules and regulations or has other behavioural issues. Variable remuneration payments are only made in cash.

Collective variable remuneration

The collective remuneration is a bonus that is based on the result criteria Combined Ratio and Required return on capital. The Club's potential total bonus amounts to 20 % of the surplus after consideration for the return on capital requirement, which is an amount decided by the Board. The maximum bonus amount, however, is limited to 10 % of the Club's gross annual payroll amount, including social security expenses and employer's contributions. The maximum bonus amount per individual is limited to 10 % of his or her gross annual salary.

Individual variable remuneration

The individual variable remuneration is a bonus based on performance and results. All employees may qualify themselves for this bonus, but the decision is made by the Board for senior executives. Remuneration to employees who work with compliance or in the control function is to be based on their performance on regulatory compliance, internal control or risk control and it should be independent of the work areas that they control.

Individual bonuses may not exceed 3 % of the employee's gross annual salary. Neither may the Club's total payments for individual bonuses exceed 2 % of the Club's total annual gross payroll amount.

Pensions and similar remuneration

The pension obligations are comprised of pension plans that are regulated through collective agreement and national insurance laws. The obligations consist of both defined contributions and defined benefit plans. For defined contribution plans, pension costs consist of the premium paid for securing the pension obligations in life insurance companies. The Club's pension plans for collective pension agreements are guaranteed through insurance agreements.

B.1.2 Related-party transactions

With the exception of what is required by insurance contracts, there are no related party transactions with Board members. Neither are there any related party transactions with senior executives of the Club. The Club maintains a register over all contracts between the Club and its Board members. None of those contracts in 2020 were of such a nature that they should have been included in the Club's Register of Disqualification.

B.2 Fit and proper requirements

The Club's Fit & Proper requirements are:

- Formal qualifications, knowledge and experience within the insurance sector, other financial sectors or other relevant sectors or businesses
- In the event duties are to be allocated to a person having a function within the Club that require knowledge within any of the following areas, the person must have adequate skills within that area. The areas are: accounting, actuarial issues,

corporate management, business strategy and business models, system of governance and regulatory framework

- Honesty and financial soundness based on evidence regarding their character, personal behaviour and business conduct including any criminal, financial and supervisory aspect.

Processes to verify the fit & proper requirements:

Election of board members

The process for proposing board members for election at the AGM is managed by the Election Committee. This committee shall meet at least once per year.

The committee shall assess prospective Board members with respect to the above fit & proper requirements before a proposal is put forward to the AGM. When making a nomination the committee shall ensure that there is an appropriate diversity within the Board of qualifications, knowledge and relevant experience in the following areas:

- Shipping
- Insurance and financial markets
- Business strategy and business models
- System of governance
- Financial and actuarial analysis
- Regulatory framework and requirements

The committee shall also verify that there is no conflict of interest between the appointment to the Club's Board and the candidate's other engagements.

The committee shall document its work including its assessments.

Employment of the managing director

The Board shall assess the prospective managing director with respect to the above fit & proper requirements. The assessment shall be documented.

Employment and continuing fit & proper verifications of Persons Having Key Functions

The director human resources and the director corporate legal shall assess persons having key functions with respect to the above fit & proper requirements. The assessment shall be documented.

Persons subject to the fit & proper requirements shall inform the Club about any change in circumstance that may have an adverse effect on the performed assessment.

The director human resources and the director corporate legal shall perform annual fit & proper verifications of persons having key functions. The verifications shall be documented.

Reporting

The director corporate legal is responsible for reporting the outcome of the fit & proper assessment to the Swedish financial supervisory authority as follows:

- Whenever a new Board member has been elected
- Whenever a new election committee member has been appointed
- Whenever a person having key function has been employed
- Whenever there has been a change in the Board's constitution, an assessment of that the Board as a collective fulfils the above stated diversity in qualifications, knowledge and experience.

B.3 Risk management system including the own risk and solvency assessment

Risk monitoring

The purpose of The Swedish Club's risk management system is to create and protect value for the members of the undertaking. The risk management system safeguards that the Club is operating within acceptable limits according to its risk appetite and tolerance limits.

The system is characterized by a holistic, integrated and top down driven enterprise-wide risk management. The risk management is based on a risk culture shared by the entire organisation and using a common risk language. The risk management activities are executed through the risk management control cycle which involves the systematic identification, valuation, monitoring and reporting of all existing and emerging risks.

The risk management function is responsible for monitoring the Club's risk management system and reporting to the managing director, and in the event of major risk exposure, directly to the Board. The function is headed by a risk manager who is objective and free from undue influences from other functions and from the administrative, management or supervisory body. The risk management function reports to the Board twice per year.

Risk appetite, tolerance and key risk indicators

The Swedish Club has expressed its overall risk appetite in terms of quantitative tolerance levels in its Risk Tolerance and Solvency Directive approved by the Board. In order to be able to monitor whether the risk level for each risk category is within the agreed limits, so called key risk indicators, KRI, have been developed and are monitored. The key risk indicators are easily accessible and they are linked to the tolerance limits decided.

Risk Committee and Risk Owners

The Risk Committee is a forum which develops methods and procedures to be used in the operations in order to identify, assess, control, mitigate and report any existing or emerging risks which the Club is, or may be, exposed to in order to create and preserve value. The most important task for the Committee is to communicate these methods and procedures to the operations where the daily risk management is performed.

Each department, together with the risk management function, has appointed risk owners. The risk owners are responsible for coordinating the risk management activities on an operational level, i.e. the first line of defence. The responsibility of managing the risks lays on each individual dealing with these risks. This method leads to a truly holistic, value driven, top-down and integrated Enterprise Risk Management (ERM) process that involves the whole organisation.

An annual workshop dealing with risk identification, risk valuation and risk mitigation is carried out and led by the risk owners in each department. The workshop is facilitated by the risk management function and the findings and actions required to mitigate the risks

are registered in the Club's web-based application called SCORR, Swedish Club Operational Risk Register.

Incidents or near misses are reported in SCIR, Swedish Club Incident Reporting, which every employee of the Club has access to.

The risk owners report annually to the risk management function on the risk management tasks.

The Own Risk and Solvency Assessment (ORSA) process

The Club has developed its own internal capital model, (ICM) for the purpose of quantifying its own risks. The ICM uses stochastic simulations to generate claims according to probability distributions, which are based on the Club's own historical outcomes and relevant external data. For the purpose of calculation of the market risk of the investment portfolio, an Economic Scenario Generator, ESG, is used.

The main assumption about the business development is the Club's most recent financial plan.

The ORSA of the Club is carried out at least annually in accordance with the Club's Directive for Own Risk and Solvency Assessment resulting in a written report which is approved by the Board and filed with Finansinspektionen.

The ORSA is an integral part of the Club's business strategy and business planning process. The result and the findings of the ORSA process are taken into account on an ongoing basis in the Club's strategic decisions.

The process begins with business planning and builds on input derived from the risk management process. The forward looking requirement of own capital is calculated for the next 5 years.

The risk management function is responsible for the data quality of the parameters used in the model, i.e. that the data is complete, correct and relevant. Further, relevant stress tests, sensitivity analyses and reverse stress tests are carried out and reported to quantify the effect of these adverse scenarios on the Club's own funds.

B.4 Internal control system

The internal control system is designed to provide reasonable assurance regarding the achievement of objectives in the following three categories: Effectiveness and efficiency of operations; Reliability of financial reporting; Compliance with applicable laws and regulations.

The internal control within the organisation is secured through three levels. The first level of internal control is carried out by the operational functions. The second and third levels are independent of the operational functions. The second level consists of the risk management function, the actuarial function and the compliance function.

The third level is the internal audit. This function is fully independent and appointed by the Board.

Managers of an operational function or a geographical team are responsible for internal control and compliance within their area of responsibility. They make sure that the employees in the department are familiar with guidelines and instructions in the management system as well as all applicable rules and regulations. Managers shall control and follow-up compliance within their area of responsibility and take corrective action in case of non-compliance. The operational managers are also responsible for informing the risk management function, the actuarial function, the compliance function and the internal audit function of any circumstance that may be relevant for the performance of their respective duties.

The directive for compliance is reviewed annually by the Board and shall ensure that the Club at all times acts in compliance with the applicable laws, rules and regulations that apply to the Club's operation.

The compliance function consists of a compliance manager, a compliance control officer and compliance coordinators. The role of the compliance manager is to identify, estimate and reduce the risks related to non-compliance; monitor relevant legislation and changes in existing rules and regulations; provide support and advice to the organisation in respect of compliance matters; provide information and training in respect of rules and regulations when necessary; obtain compliance confirmation from responsible managers; support the business when new policies, routines and instructions are to be issued. The role of the compliance control officer is to create methods and routines for auditing compliance and to identify essential risks in the business related to non-compliance. The risk analysis is continually updated and monitoring activities are conducted in accordance with the prescribed compliance plan. Control operations that have been carried out are reported to the Finance & Audit Committee. The role of the compliance coordinators is to assist in the compliance work in the operational functions.

B.5 Internal audit function

The internal audit function is fully independent and outsourced to an external auditing firm. The function evaluates the system for internal control, any other parts of the system of governance, the independence of the actuarial function, the employees' remuneration policy, and reports its findings to the Finance & Audit Committee. The internal audit function is subordinated to the Board.

The audits are conducted in accordance with the prescribed audit plan as approved by the Board.

B.6 Actuarial function

The tasks of the Actuarial Function are governed by the Directive for the Actuarial Function.

The actuarial function is responsible for coordinating the calculations of the technical provisions, participating in the ORSA process and strengthening the Club's risk management system. The function also states an opinion on the overall underwriting policy and suitability of the reinsurance program.

The main task of the actuarial function is the coordination and the validation of the calculations of the technical provisions for both financial reporting purposes and for

solvency calculations. The actuarial function is also responsible for making sure that only qualitative data is used in these calculations.

B.7 Outsourcing

The Club's outsourcing policy ensures that outsourcing of critical or important functions or activities do not lead to any of the following:

- a) Materially impairing the quality of the Club's system of governance.
- b) Unduly increasing the operational risk.
- c) Impairing the ability of the supervisory authorities to monitor the compliance of the Club.
- d) Undermining continuous and satisfactory service to members.

Management assesses whether a function or activity is critical or important and reports to the Board whenever outsourcing of a critical or important function or activity is considered and also when an agreement has been signed.

Currently, the Club has outsourced only one critical or important function: the internal audit function. The appointed service provider is the auditing firm KPMG in Sweden.

B.8 Any other information

No other material information is applicable.

C. Risk profile

We distinguish between four main risk areas: underwriting risk, market risk, credit risk and operational risk. In the figures shown in the tables under this section are the results from the regulatory solvency calculations.

C.1 Underwriting risk

Underwriting risk is the uncertainty that future insurance claims stemming from current exposures cannot be covered by the Club's premium income and that the claims provisions are not sufficient to cover claims costs and loss adjustment expenses for incurred claims. The former risk is called premium risk and the latter risk is called reserve risk.

The Club's comprehensive reinsurance arrangements reduce the fluctuations in the claims results net of reinsurance and helps protect the Club from incurring losses that are associated with very large claims, including the aggregation of losses from multiple insured interests.

The accuracy of the premium models is monitored on a regular basis, by comparing the actual outcome per insurance class to the expected result. The same model is also used to simulate claims costs in the Club's internal capital model, which enables a consistent treatment of underwriting risk based on the capital requirements at all levels, i.e. from the company level down to the underwriting of an individual risk.

Reserve risk is associated with the uncertainty about the provisions for unpaid claims outstanding and the premium provision.

Amounts in million	2020 SEK	2019 SEK	2020 USD	2019 USD
Premium and reserve risk	714	676	87	73
Catastrophe risk	203	216	25	23
Diversification	-127	-133	-16	-14
Total underwriting risk	790	760	96	82

C.1.1 Premium risk

Premium risk is managed by careful risk selection. Potential members' vessels and the vessel management teams are thoroughly reviewed prior to acceptance. Rating systems and premium models are used to ensure that correct premium levels have been charged.

The accuracy of the premium models is monitored on a regular basis, by comparing the actual outcome to the expected results. The same model is used to simulate claims costs in the internal capital model which leads to a consistent treatment of the underwriting risk.

The Club's reinsurance program reduces the variance of the claim costs net of reinsurance. This protects the Club from incurring large individual losses and aggregate losses.

C.1.2 Reserve risk

Reserve risk is the uncertainty about the provisions for claims incurred. The Club's claims handlers are instructed to assess the expected claims costs on a best estimate basis with a

slight cautionary bias. This means that the final total claims cost is expected to be lower than the claims provisions.

The actuarial function performs reserve calculations at each year end while the finance department follows up the run-off result on a quarterly basis.

C.1.3 Risk concentration

Since the vessels insured by the Club are trading all over the world, the conventional definition of risk concentration, which is a consequence of the insured objects' geographical position, is not applicable. However, risk may accumulate as vessels may be insured for more than one insurance class. In these cases, the same incident can lead to claims in more than one main insurance class, also called clash claims. Based on how the different reinsurance protections have been set up, this could affect the allocation of claims costs between reinsurers and the Club. Clash claims primarily concern the insurance classes shown in the table below.

	Vessels	HM ¹⁾	P&I ²⁾	LH ¹⁾	Interest ¹⁾
Four classes	136	X	X	X	X
Three classes	32	X	X	X	
	427	X	X		X
	514	X		X	X
	0		X	X	X
Two classes	73	X	X		
	96	X		X	
	2,104	X			X
	26		X	X	
	0		X		X
	29			X	X
Vessels by class of insurance		4,226	1,407	966	3,432
Total number of vessels		5,349			

¹⁾ Incl. Energy risks ²⁾ P&I Owners

The table shows the concentration of insurance classes per vessel as of 31 December 2020: 2.5 % of vessels were exposed to four insurance classes, 18.2 % to three classes and 43.5 % to two classes.

The top five largest members and brokers in terms of gross annual premium are shown below. The numbers represent the total of affiliated companies, i.e. operations owned by the same parent are consolidated.

	Share of gross annual premium
Member 1	5 %
Member 2	3 %
Member 3	3 %
Member 4	3 %
Member 5	2 %

	Share of gross annual premium
Broker 1	10 %
Broker 2	6 %
Broker 3	5 %
Broker 4	4 %
Broker 5	4 %

C.2 Market risk

Market risk means the risk of loss or risk of adverse change in the financial situation resulting, directly or indirectly, from fluctuations in the level and in the volatility of market prices of assets, liabilities and financial instruments. Market risk is measured by the impact of movements in the level of financial variables such as stock prices, interest rates and exchange rates. The Market risk of the Club is composed of interest rate risk, equity risk, spread risk, concentration risk and currency risk.

The Club's investments are made within the framework of the *Directive for Investments* continuously reviewed by the Finance & Audit Committee and established at least annually by the Board of Directors. The Club's investments are managed with the support of Mercer Global Investment through well diversified funds. All new funds must be approved by the Finance and Audit Committee.

The investment directive defines the following: responsibilities; benchmarks; rating and liquidity requirements on bond holdings; regulatory and liquidity requirements on equities; limitations regarding alternative investments and derivatives; cash counterparty limits; requirements on custodians; risk tolerance calculation methodology and risk limits; and, reporting and follow-up procedures and responsibilities.

The performance of the Club's investments is monitored continuously and summarised monthly. The market risk is calculated monthly by using a value at risk model with a time horizon of 12 month and confidence level of 99.5 %, i.e., 1-in-200 level. The result of the model along with the results from the regulatory stress tests are reported to the Finance and Audit Committee.

The Club's exposure to changes in interest rates stems from funds of interest-bearing assets and from the Club's liabilities, i.e. the cash flow of future payments which are valued on a discounted basis using the actual yield curve for US government bonds. The structure of the portfolio is such that it matches the duration of the interest bearing assets with the duration of the liabilities to the extent possible.

Spread risk refers to the risks that arise from changes in the level or in the volatility of credit spreads over the risk-free interest rate term structure.

The investment portfolio has a composition intended to match the currency exposure of the insurance operations. Consequently, there are investments denominated in USD and EUR in amounts reflecting the calculated exposures to USD and EUR respectively with regard to claim costs.

Concentration risk in the investment portfolio is captured by the look-through process applied in the regulatory solvency calculations by grouping the portfolio positions according to single name exposures.

The table below shows the distribution of the asset categories in Collective Investments Undertakings as per 31 December 2020.

Asset category	Current allocation
Equity	20 %
Fixed income	80 %

The asset allocation mentioned above includes derivatives which may be used in the investment portfolio for the purpose of rearranging the exposures. Outside the investment portfolio currency contracts are used for the purpose of hedging SEK operating expenses, the value of these currency contracts is shown in the balance sheet as Derivatives.

The table below show the development of the market risks compared to last year. The increase in capital requirement for market risk was driven by increased size of the investment portfolio and, to some extent, increased allocation to high-yield securities.

Amounts in million	2020 SEK	2019 SEK	2020 USD	2019 USD
Interest rate risk	93	77	11	8
Equity risk	252	274	31	29
Spread risk	237	185	29	20
Concentration risk	-	-	-	-
Currency risk	82	75	10	8
Diversification	-166	-146	-20	-16
Total market risk	498	466	61	50

C.3 Credit risk

The credit risk (also referred to as counterparty default risk) is defined as the risk of loss due to default of the Club's counterparties and debtors over the forthcoming twelve months. It includes risk-mitigating contracts, such as reinsurance arrangements and receivables from intermediaries and members.

The Club's exposure to counterparty default is dominated by the receivables from reinsurance contracts, including the risk mitigation effect of hypothetical catastrophe scenarios, due to the extensive reinsurance program described in section C.7. Other exposures consist of receivables from members and received guarantees from other P&I Clubs, major insurance companies and banks.

Amounts in million	2020 SEK	2019 SEK	2020 USD	2019 USD
Counterparty default risk	89	124	11	13

C.4 Liquidity risk

Liquidity risk is the risk of loss arising from a situation where (1) there will not be enough cash to meet the needs of paying insurance claims on time, (2) sale of illiquid assets will yield less than their fair value, or (3) illiquid assets will not be sold at the desired time due to lack of buyers.

The Club seeks to ensure that a suitable level of liquid assets is held to cover all future liabilities as they fall due. There is little liquidity risk in the short term of the Club becoming short of cash funds, since the majority of the assets in the investment portfolio can be converted to cash within a few days. In addition, the Club is not dependent on financing from capital markets. With the current setup, the capital requirement for liquidity risk is considered to be immaterial.

C.5 Operational risk

The Club is exposed to a number of different types of operational risk. In order to assess these risks, the whole organisation participates in annual self-assessment activities. The aim with these activities is to identify, measure and mitigate or eliminate these risks.

Important operational risks also include risks that can arise in conjunction with a catastrophic scenario, such as an office fire, IT systems breakdown, a lengthy power failure, etc. The Club has an established contingency plan for such situations which is reviewed annually.

Amounts in million	2020 SEK	2019 SEK	2020 USD	2019 USD
Operational risk	71	64	9	7

C.6 Other material risks

Due to the current Covid-19 pandemic there is an increased risk that key personnel become indisposed due to illness.

C.7 Any other information

C.7.1 Risk strategies and procedures

In this section the risk management strategies and procedures are described for each of the above mentioned risk areas.

Premium risk

Effective management of underwriting risks is fundamental to the Club's operations. Potential member's vessels and management team are thoroughly reviewed prior to acceptance. Rating systems and premium models are used to ensure that correct premium levels are charged.

The Club maintains an internal model for pricing insurance risks. The model is also used for simulation of claims costs in the Club's internal capital model, ICM. This enables a consistent treatment of underwriting risk based on the capital requirements at all levels, i.e. from the company level down to the underwriting of the individual risks.

The model is calibrated regularly by updating the parameters used according to the observed outcome.

In order to increase diversification and avoid large claims the Club's strategy is to accept smaller shares on the individual risks in the Marine as well as the Energy segment. The risk concentration is measured not only as the average percentage for own accounts but also in terms of number of vessels insured, their age, type and size, the last three of these being also premium arguments. The clash risk, i.e. the same event leading to claims in more than one business areas, is also monitored.

The Club's comprehensive reinsurance programs are designed to optimize the economic performance of the Club given its risk appetite and to protect the Club from the impact of catastrophic events as well as an accumulation of claims.

The Club re-assesses the effectiveness and appropriateness of its reinsurance structure once a year.

In section C.7.3 a number of adverse scenarios are described and have been developed to assess the Club's expected net loss if these scenarios were to materialise.

The risk transfer mechanism for the underwriting risk is further explained in section C7.2.

Reserve risk

Reserve risk is the uncertainty associated with the provision for unsettled claims and the provision for unearned premiums. When calculating the provision for unearned premiums, consideration is given to differences in risk exposures during the policy period.

Provisions for reported claims are based on individual assessments of the expected claim costs using the latest relevant information available. Provisions for unsettled claims must reflect the total liability, which includes claims handling costs, expected claims inflation and currency considerations. Issues arising from the claims assessment are discussed once a year within the Reserve Committee.

Incurred but not reported claims, IBNR, are calculated using adequate actuarial methods described in the Actuarial Directives. The uncertainty of the estimates at different levels of confidence are also calculated.

Run-off analyses are performed giving valuable information about possible over- or underestimation of the provisions.

Market risk

The Club's primary objective is to maximize its long-term investment returns given its risk appetite for market risk and matching the characteristics of the assets with those of the liabilities'.

The investment portfolio's currency mix and average duration plays thus an important role when matching the Club's assets and liabilities. The investment philosophy is based on risk diversification and investing primarily in assets with a high level of creditworthiness. In order to minimize and control risks, the Board of Directors has established an investment policy, the Investment Directive, which governs the Club's asset management. A model has been developed in order to stress the investments and measure the total value at risk. It is based on similar principles as those applied in the solvency regulation.

Counterparty default risk

The way the different types of counterparty risks, mentioned in section C.3. above, are managed depend on their characteristics. For example, reinsurance counterparties are selected and managed by monitoring of their external rating development, while monitoring receivables related to members rely on internal evaluations of financial viability.

Common for all counterparties is that the Club needs to assess each counterparty's probability of default and monitor the exposure towards them at any time. Our aim is to minimize the exposures through timely calls for payments as soon as possible. The outstanding exposures are thoroughly monitored by designated Club personnel.

Counterparties' ratings are used as proxy for their probability of default. The Swedish Club rely on the ratings performed by the well-known rating institutions. However, an own assessment is also performed since the Club, together with the reinsurance brokers, is collecting relevant information in respect to the reinsurers throughout the year.

Minimum rating limits apply to the participating reinsurers, which means that no reinsurer may have a rating lower than A- (Standard & Poor's) or A3 (Moody's).

Operational risk

Operational risks might arise as a result of inadequate processes, human factors or ambiguous management practices. The Club has no risk appetite towards operational risk. The Club has a history of adequate documentation of critical activities via its quality systems, an operational risk register, SCORR, and an incident register, SCIR. This helps ensure that many undesired operational events are avoided.

C.7.2 Risk transfer mechanism

The Club has had a consistent reinsurance strategy for many years which uses both excess of loss, stop loss and quota share techniques for its risk mitigation.

For Marine & Energy, the Club purchases its own protection. This is based on long-term relationships with some of the world's leading reinsurance companies. For P&I, the reinsurance is based on the cooperation within the International Group of P&I Clubs, where claim costs between USD 10 million and USD 100 million are shared (the Pooling Agreement). To supplement this, the Group purchases reinsurance protection up to USD 3,100 million (Excess reinsurance programme). The International Group's joint reinsurance company is Hydra Insurance Group Ltd (Bermuda). It reinsures the Group's P&I pool claims for USD 70 million in excess of USD 30 million and part of the layer USD 650 million in excess of USD 100 million.

Parts of the pool, as well as parts of the reinsurance protection are covered by the captive company, Hydra Insurance Company Limited (Bermuda), which is owned by the Group's 13 members. Hydra is a protected cell company, which means that the assets and liabilities in each cell are legally separate from the other cells. Each of the 13 clubs owns one of the protected cells from which claims are paid and premiums received.

Hydra writes two reinsurance contracts for the clubs:

- 100 % of the coverage between USD 30 and 100 million.
- Maximum USD 100 million of the coverage between USD 100 and 750 million.

Our share of the business in Hydra is approximately 4 %. For more information on International Group see www.igpandi.org.

C.7.3 Stress testing and sensitivity analysis

In complement to the economic capital calculated by using the Clubs own internal capital model a number of adverse scenarios have been developed in order to assess the Club's expected net loss if these scenarios were to materialise. The tables in the following sections summarises the scenarios and their implications.

The below result of the stress test for underwriting risk is presented net of reinsurance.

#	Event type	Stress test scenario	1-Year Net Loss USD million
1.	High Severity Event	Single vessel catastrophic marine accident (High value vessel causing P&I overspill, and aggregation with Marine, incl. Sue & Labour)	17
2.		Two vessel collision (High value vessels, both entered for H&M and P&I with TSC)	30
3.		Two TSC entered vessels affected by natural disaster (A Tsunami or Windstorms destroying two vessels in port or at yard)*	30
4.		Energy total loss (MOU with TSC line above USD 10 million)	2
5.	Frequency Shift	Significant increase in incidents (20 % higher frequency than expected)	19
6.		More pool claims from TSC, (TSC's pool share increases by 3 %)	7
7.		Total Loss Model HM/IV increased by 100 %	6
8.	Claims Inflation	Significant shift in claims inflation (20 % higher severity than expected)	15
9.	Terror /	Terror attack (Loss of 2 vessels with death/injuries)	3
10.	War	Piracy (Attack on tanker)	3

* Conservatively, it has been assumed that there are no (zero) previous losses from other claims counting towards the USD 8.5 million excess USD 1.5 million aggregate box cover in the year. Annual Aggregated Deductible (AAD) amounts to USD 26.5 million.

The following stress tests for the market risk have been modelled as isolated stresses. The scenarios are intended to reflect the potential impact on the total portfolio, under a range of forward looking economic conditions.

Mercer have modelled Investment Grade (IG) and High Yield (HY) corporate bond shocks independently in stresses 4 and 5, enabling a more granular review and comparison of those areas driving risk.

The table below shows the high-level results of the stress test and scenario analysis performed by Mercer. Negative loss expectations represent real gains in portfolio asset values.

#	Stresses and scenarios	1-Year Portfolio Loss USD million
1.	Global equities decline (1-in-200 VaR)	36
2.	1.75 % parallel shift in yield curves	14
3.	25% appreciation of USD in relation to other currencies	10
4.	5 % of IG corporate bonds and 5 % of government bonds below BBB-default (70 %) LGD, plus a 2 % spread increase	12
5.	5 % of HY corporate bonds default (70 % LGD)	1
6.	5 % increase in High Yield spreads	6
7.	1 % loss across active mandates	2
8.	'Base Case - U-shaped recovery'	-9
9.	'Ideal Growth - V-shaped recovery'	-20
10.	'Inflationary Growth - V-shaped recovery'	8
11.	'Weak Growth – W shaped recovery'	8
12.	'Stagflation'	27
13.	'De-Globalisation'	14
14.	'China/Emerging Markets Crisis'	12
15.	'Financial Crisis'	31

The following table shows the stress tests for the credit risk and the operational risk.

#	Stress test scenario	1-Year Loss USD million
1.	10 % of outstanding reinsurance defaults (one or more reinsurers, representing 10 % of reinsurance recoverables default)	13
2.	10 % of members and clients default (A severe shipping downturn causes 10 % of members/clients to default)	1
3.	Significant corporate or operational risk event(s) (1-in-200)	7

The result of the stress testing and sensitivity analysis show that the Club is most sensitive to large fall in the equity market and large clash claims effecting several insurance policies.

D. Valuation for solvency purposes

D.1 Assets

Amounts in million	SEK		USD	
	Swedish GAAP	Solvency II	Swedish GAAP	Solvency II
Investment assets	3,253	3,253	397	397
Reinsurance recoverables	586	582	71	71
Receivables	996	996	122	122
Other assets	345	306	42	37
Total assets	5,180	5,136	633	627

The Club's investments are for Solvency II purposes valued at market value with the same principles used in the statutory accounts.

The reinsurance recoverables have, for solvency purposes, been discounted with the risk free yield curve for US dollars given by EIOPA.

The difference in other assets is explained by deferred acquisition costs which are netted in the technical provisions for Solvency II but disclosed under deferred acquisition costs in the statutory accounts.

D.2 Technical provisions

D.2.1 Methodology of calculating the technical provision for Solvency II purposes

The best estimate is calculated separately for each of the following homogenous risk groups:

- Marine: Hull & Machinery and Energy
- FD&D: Freight, Demurrage & Defence
- P&I: Protection & Indemnity
- Pool claims

These risk groups have similar risk characteristics in terms of underwriting policy, claims settlement patterns, risk profile, product features, and expense structure and are also sufficiently so that a statistical analysis of the risks can be performed.

The best estimate of the premium provisions and the best estimate of the claims provisions are calculated separately for each homogeneous risk group.

The best estimate is the probability weighted average of future cash flows discounted with the risk free yield curve for US dollars given by EIOPA. The probability weighted average future cash flows are calculated according to actuarial best practice and use several methods and techniques such as the development factor model, DFM, the Bornhuetter-Ferguson technique and the Cape Cod method. The accrual of the future cash flows is based on smoothed historical payment patterns obtained from the chain ladder method.

The risk margin is computed by calculating the discounted solvency capital requirement for all future run-off years, multiplied by the cost of capital level given by the regulator. In the

calculation of the solvency capital requirement for each future run-off year the market risk, the premium risk and the counterparty risk, other than regarding reinsurance counterparties, are all assumed to be nil.

D.2.2 Reconciliation between the technical provisions presented in the statutory accounts and the technical provisions calculated on Solvency II basis

The tables below show the amounts of provision booked in the statutory accounts and the provisions calculated for solvency purposes along with the differences between these.

Amounts in SEK million	Swedish GAAP	Solvency II	Difference
Gross			
Premium provision	358	356	-2
Claims provision	2,285	1,996	-289
Risk margin	-	141	141
Total	2,643	2,493	-150
Reinsurer's share			
Premium provision	31	31	-0
Claims provision	555	551	-4
Counterparty default adjustment	-	-0	-0
Total	586	582	-4
Net technical provisions	2,057	1,911	-146

Amounts in USD million	Swedish GAAP	Solvency II	Difference
Gross			
Premium provision	44	44	-0
Claims provision	279	244	-35
Risk margin	-	17	17
Total	323	304	-19
Reinsurer's share			
Premium provision	4	4	-0
Claims provision	68	67	-1
Counterparty default adjustment	-	-0	-0
Total	72	71	-1
Net technical provisions	251	233	-18

The difference between the provisions, net of reinsurance, calculated on solvency II basis and that booked in the statutory accounts amounts to USD 18 million i.e. the provision according to solvency II is lower than that shown in the statutory accounts.

There are five possible sources for the differences between the two regimes and these are:

1. Different valuation principles for calculating the premium provisions: The notion of unearned premiums doesn't exist in the solvency valuation. Instead the premium provision described above is used. The effect of the different valuation principles used amounts to nil. This is due to the fact that the combined ratio assumed in the solvency II calculation of the premium provision is 100 % and thus the undiscounted premium provision equals the unearned premium reserve in the statutory accounts.
2. Prudence margin: In the statutory accounts it is allowed to use a prudence margin in contrast to the solvency calculations where such a margin is not allowed. This effect amounts to USD 33.6 million.
3. Discounting effect: The cash flows from the technical provisions calculated for solvency purposes are discounted with the risk-free yield curve for US dollars while the technical provisions shown in the statutory accounts are undiscounted. The discounting effect amounts to USD 1.4 million.
4. Counterparty default adjustment: Receivables from counterparties need to be adjusted for counterparty default. These effects both the reinsurer's share of premium provisions and the reinsurer's share of claim provisions. The effect of the adjustment amounts to USD 48 thousand. Due to this very low amount a zero value is shown in the tables below.
5. Risk margin: There is no risk margin in the statutory accounts while the risk margin is part of the technical provisions calculated on solvency basis. The risk margin amounts to USD 17.3 million.

The differences between the provisions, net of reinsurance, calculated on solvency II basis and that disclosed in the statutory accounts are grouped and summarised according to the source of differences in the table below:

Amounts in million	Difference SEK	Difference USD
Premium provisions	-	-
Prudence margin net claim provisions	-275	-34
Discounting of technical provisions	-12	-1
Counterparty default adjustment	0	0
Risk margin	141	17
Total	-146	-18

The largest difference between the technical provisions is the prudence margin accounted for in the statutory statement and which amounts to USD 34 million.

D.2.3 Uncertainty associated with the value of technical provisions

Since the technical provisions are estimated by using different models based on historical outcomes of the claims development there are uncertainties associated with these estimates. These uncertainties have been calculated by using a so called bootstrapping method which captures both process error (random variations) and parameter error (variations due to the uncertainty around the parameters used in the model). The results of these calculations show, that the probability of the technical provision disclosed in the statutory accounts to be insufficient for the total payments for all claims incurred at the balance date on ultimo basis, i.e. for the whole run-off period, is estimated to 11 %.

D.3 Other liabilities

Amounts in million	SEK		USD	
	Swedish GAAP	Solvency II	Swedish GAAP	Solvency II
Pension benefit obligations	3	3	0	0
Deferred tax	73	95	12	9
Insurance & Intermediaries payables	91	91	11	11
Reinsurance payables	479	479	58	58
Payables (trade, not insurance)	3	3	0	0
Any other liabilities, not elsewhere shown	66	66	8	8
Total	714	736	90	87

The liabilities described above are all valued using the same valuation bases, methods and main assumptions for solvency purposes as in the statutory accounts. There are no material changes over the reporting period regarding these principles.

In the statutory annual accounts the Club recognised a net deferred tax liability (DTL) position of SEK 73 million. As an effect of Solvency II valuation adjustments the net DTL recognised in the Solvency II balance sheet is SEK 95 million.

The revaluated items are specified in the table below with a tax rate of 20.6 % applied.

Amounts in million	SEK	USD
Statutory DTL	73.5	9.0
Elimination of intangible assets	0.0	0.0
Elimination of deferred acquisition cost	-8.0	-1.0
Recalculation of net technical provisions	30.0	3.7
Solvency II DTL	95.4	11.7

D.4 Alternative methods for valuation

The Club does not use alternative methods for valuation.

D.5 Any other information

No other material information is applicable.

E. Capital management

E.1 Own funds

The Club's objective is to maintain a solvency level that is within the limits defined in the Club's Directive for Risk Tolerance and Solvency. An additional objective is to achieve a combination of a capital position and a risk profile that is at least in line with a single A Standard & Poor's capital value.

The directive sets out the Club's overall risk appetite, its quantitative tolerance levels, defines tolerance limits for each relevant and material category of risk and states the desired level of capitalization of the Club as a function of its own risk tolerance and business plans.

Core risks, i.e. insurance risks and market risks are monitored periodically. The time horizon of the business planning is 3 years, however, in the ORSA process a 5-year projection is used.

The Club has maintained sufficient capital to meet its minimum capital requirement throughout the period covered by this report.

Finansinspektionen has approved an application from the Club to use a method for determining ancillary own funds as tier 2 capital. The method is approved until 31 December 2024 and will after this date require a new approval. The maximum amount allowed can never exceed 50 % of the SCR.

The tier 2 ancillary own funds represents the ability for the Club to make an additional call for premiums. However, the probability for this to materialize is low.

The eligible amount of own funds, tier 1 and tier 2 capital, to cover the Solvency Capital Requirement is SEK 2,434 (2,777) million. The eligible amount of own funds to cover the Minimum Capital Requirement is SEK 1,906 (2,276) million and is comprised entirely of Tier 1 Basic Own Funds.

Following table explains the differences between the statutory accounts and the excess of assets over liabilities as calculated for solvency purposes.

Amounts in million	SEK	USD
Statutory equity and untaxed reserves	1,895	231
Prudence margin - net technical provision	275	34
Discounting effect - net technical provision	12	1
Risk margin - net technical provision	-141	-17
Intangible assets	0	0
Deferred acquisition cost	-39	-5
Deferred tax	-95	-12
Solvency II excess of assets over liabilities	1,906	233

E.2 Solvency Capital Requirement and Minimum Capital Requirement

The table below shows the risk modules of the SCR calculation using the Standard Formula.

Amounts in million	SEK 2020	SEK 2019	USD 2020	USD 2019
Market risk	498	466	61	50
Counterparty default risk	89	124	11	13
Non-life underwriting risk	790	760	96	82
Diversification between risk modules	-296	-296	-36	-32
Operational risk	71	64	9	7
Loss-absorbing capacity of deferred taxes	-95	-116	-12	-12
Total SCR	1,056	1,001	129	107

The Club uses EIOPA's Solvency II Standard Formula. Simplified calculations for the standard formula computation is not used nor is Undertaking Specific Parameters (USP) used.

The amount of the Club's MCR at the end of the reporting period was SEK 342 million, corresponding to USD 42 million.

The inputs used to calculate the MCR are the best estimate net of reinsurance and the written premiums net of reinsurance in the last 12 months.

	2020	2019
Ratio of Basic own funds to SCR	1.80	2.27
Ratio of Eligible own funds to SCR	2.30	2.77
Ratio of Basic own funds to MCR	5.57	6.85

Since the Club's dominating currency is USD the risk calculations in SEK between quarters can be heavily influenced by currency effects to a larger extent than if the calculations are carried out in USD. However, irrespective of reporting currency the solvency ratios are always the same due to the currency effects in the own funds.

E.3 Use of duration-based equity risk sub-module in the calculation of the Solvency Capital Requirement

Not applicable to the Club.

E.4 Differences between the standard formula and any internal model used

No internal or partial internal model is used to calculate the Regulatory Capital Requirement.

E.5 Non-compliance with the Minimum Capital Requirement and non-compliance with the Solvency Capital Requirement

As the Club has not faced any form of non-compliance with the MCR, or non-compliance with the SCR during the reporting period, or at the reporting date, no further information is included here.

E.6 Any other information

The directors do not consider that there is any further material information for the reporting period which should be disclosed regarding the capital management of the Club.

Appendix

All monetary amounts in this appendix are in SEK thousands (regulatory reporting currency).
